- Historic Preservations
- Communications
- Utility Power Generation
- Hotels- High Rise
- Sports Arenas
- Convention Centers

About Allison-Smith Company

Founded in 1943 the Allison-Smith Company LLC has evolved from a premier Atlanta electrical contracting and engineering firm into a company with a national and international presence. As a degreed electrical engineer, the founder, Robert Allison, instilled in the company a culture of applying electrical engineering acumen to the process of construction. Today, close to fifty percent of our employees are working on projects outside of the state of Georgia.

Engineering & Construction

Success in today's construction industry has to start with an understanding of the design and construction information flow. Allison-Smith Company has been an innovator in the design build approach for decades. We have the capability to develop realistic budgets and designs with surprising detail based on conceptual drawings and scope outlines. This capability is a product of historical information, project manager experience, engineering experience, computerized estimating, and a creativity to combine this information.

Building Information Modeling (BIM)

BIM is a digital representation of physical and functional characteristics of a facility. Our 2D / 3D Expertise includes the utilization of the most current version of Autodesk Design Suite (including full dynamic modeling in Revit, AutoCAD, and Navisworks) and production of engineered and coordinated models for construction in the field.

Our BIM designers are highly proficient and continue their education to stay up-to-date on the latest software advancements in the BIM world to meet our clients needs.

JOBS AT ALLISON-SMITH

Project Managers

Electrical Engineering Degree

As a project manager for Allison-Smith, you will be encouraged and trained to develop an entrepreneurial business approach to managing the electrical construction of a variety of commercial, retail, and industrial projects. Your job will include estimating, bidding, managing, billing and material purchasing. We take great pride in our engineering approach to the construction business and you can expect to be involved in design build and design assist projects.

Assistant Project Manager

Electrical Engineering Degree

The assistant project manager's central duty is to assist the project manager as outlined above and to perform any additional tasks required such as project reports, closely monitor scheduling to ensure that projects remain on track, meet deadlines and collaborate with various teams.
